MASTER OF SCIENCE in
Sustainable Design
COLLEGE of ARCHITECTURE and the BUILT ENVIRONMENT
In partnership with SMEF's Brick Group of Institutes

Combine theoretical and applied expertise in the **MS in Sustainable Design** program from Jefferson's distinctive College of Architecture and the Built Environment. Vitally important to the future of our planet, sustainable design teaches you to think in the open environment at the intersection of architecture, construction management, design and engineering. Build problem-solving skills to develop market-driven innovations to lead economic, environmental and societal sustainability for the 21st century global community.

33 Credits

The MS in Sustainable Design program, in partnership with SMEF's Brick Group of Institutes, is typically completed in 24 months.

CROSS-DISCIPLINARY, REAL-WORLD TEAMWORK

Learn to quantify and build your ideas in a collaborative environment, actualizing projects that range from high performing sustainable design buildings to sustainable initiatives for non-pro ts and start-ups.

Learn the interconnected nature and constant evolution of sustainable practice through real projects with industry partners, providing networking opportunities and hands-on practice with real-world challenges. The strong integration with the design and sustainability community in Philadelphia will provide ample opportunities for internships, volunteer positions and job placement.

SMEF'S BRICK GROUP OF INSTITUTES PARTNERSHIP

Students study for the first two semesters online in India, with one class in person at the SMEF's Brick Group of Institutes. In year two, students will move to the United States and take classes on campus at East Falls. After completion from this STEM-designated program, international students are eligible for an extension of the Optional Practice Training period, and may reside in the United States for three additional years to work in their field.
